

The Naive Baker

Group 08

Not Implemented Requirements

Some of the functionalities that were earlier decided upon to be implemented but haven't been included in the final version of 'The Naive Baker'

- 1) We had decided to divide the users into two categories: premium and non premium users. This would help us to make some features available exclusively for premium users and at the same provide options to the non premium users to upgrade to premium.
- 2) In order to make the website monetary, we had decided to limit the number of searches for a user who hasn't registered with us. But this feature hasn't been implemented.
- 3) We had decided to provide the user an additional feature to follow any particular user and get updates whenever there is a new recipe added by that user.
- 4) The feature of rating a particular recipe has also not been implemented and at the same time deleting the recipe the user has added into the system.
- 5) We had decided to include features such as 'DOTD' or 'Dish of the Day' and feed based on searches but it has been included.

- 6) There is a specified space on the dashboard where we had agreed upon to show the watch history of the user, but this particular functionality hasn't been implemented.
