The Naive Baker
Group 08

<u>Not Implemented Requirements</u>

Some of the functionalities that were earlier decided upon to be implemented but haven't been included in the final version of 'The Naive Baker'

1) We had decided to divide the users into two categories: premium and non premium users. This would help us to make some features available exclusively for premium users and at the same provide options to the non premium users to upgrade to premium. The change to premium option on the website is static.

2) In order to make the website monetary, we had decided to limit the number of searches for a user who hasn't registered with us. But this feature hasn't been implemented.

3) We had decided to provide the user an additional feature to follow any particular user and get updates whenever there is a new recipe added by that user.

4) The feature of rating or liking a particular recipe has also not been implemented and at the same time deleting the recipe the user has added into the system.

5) We have not implemented the search filter of 'Meal' on the website.
